

WP5.5: Select and enrol second group of students

WP5: Professional Diploma in Plant Clinic program (DPCP) announcement and inauguration

**(New Professional Diploma in Plant Clinic and Phytosanitary
Technologies) "609550-EPP-1-BG-EPPKA2-CBHE-JP"**

Prepared by

The report was written by the members of Plant Clinic Centers in Sohag University

Although the first group cycle has not ended yet, preparation and coordination to receive the second stage are accompanied by teaching the students of the first group. We have accumulated a lot of important information while registering new students for the first stage or while teaching theoretical and practical courses and field visits. Among the information repeatedly recorded by students of the first admission cycle is that graduates frequently inquire about the extent of acceptance of the idea of a plant clinic among small farmers. The cultivated areas owned by each individual are small in the Sohag Governorate area. Hence, this point was addressed when teaching the students of the first year that the plant clinic provides its services to large and small farmers, and that the plant clinic workers will continue to provide free grants to small farmers after obtaining the university's approval for these grants

Through the teaching and activities conducted for graduates registered for the first session, newcomers will be convinced to join the upcoming second courses and beyond. Our success achieved in the dissemination procedures that were followed during the first session will continue to ensure that we continue to provide our services to the agricultural sector at the level of the geographical area surrounding the university and in all the villages of Sohag Governorate.

Through the followed dissemination plan, we recorded the interest of faculty members within the relevant department to participate in diploma activities and the activities of the Plant Clinic Centre. Faculty members from other departments, other than faculty members in the Department of Botany and Microbiology, such as faculty members interested in insects in the Department of Zoology, and faculty members belonging to the Faculty of Agriculture, intend to participate in future activities to

teach students of the Plant Clinic Diploma, and the activities of the Plant Clinic Centre due to the services they provide to farmers.

A plan has been prepared to increase the interest of graduates from various practical colleges to enroll in the second courses and beyond, and it is as follows:

- 1) Applying a questionnaire to determine the level of satisfaction of first-cycle students during and after their graduation, and working to increase satisfaction according to the information obtained.
- 2) Direct and indirect communication of the needs of those we aim to serve.
- 3) Expanding the admission rules to include graduates from departments interested in studying chemistry, biological sciences, or agriculture.
- 4) Expanding programs to introduce the importance of plant clinic activities among small farmers.
- 5) Take measures to reassure applicants that the admission process is transparent and applied without discrimination between graduates of different specializations.
- 6) Changing study dates to suit the schedules of students working in the government or private sectors.
- 7) Increasing field visits, especially to the Agricultural Research Center in the village of Jazeeret Shandawil.
- 8) Providing training resources for infected plant specimens through the department's plant herbarium or through informational panels or guidance to specific sites where these educational resources are available.
- 9) Working to use distance education in theoretical courses in a way that saves the time of workers, if possible.
- 10) Continue to promote the Plant Clinic Diploma using university platforms and the various activities carried out by the university in the field of community service.
- 11) Continuous communication with Taiba TV channel to introduce the people of the region to the benefits will be obtained if they contact and cooperate with Plant Clinic Center.
- 12) Providing brochures introducing the botanical clinic diploma and botanical clinic services to distribute to university visitors if circumstances permit.
